The Projector Shutter

AN EFFICIENT TOOL FOR STAGE PRODUCTION

DMX-controlled front for the video projector

In most theatres, shutting out waste light from the video projector is done with a cardboard disc, gaffer tape or a black string operated by the lighting manager.

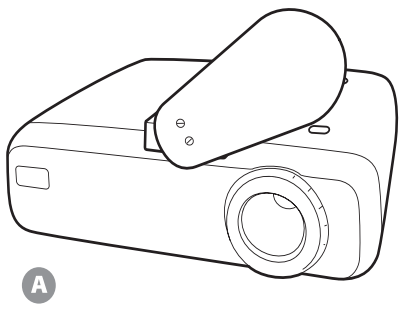
The Projector Shutter allows full control directly from the light desk.

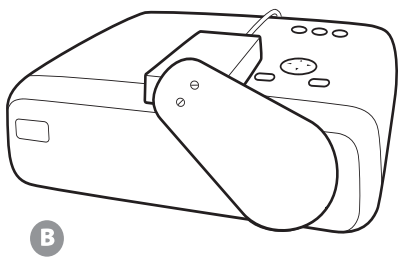
The Projector Shutter makes the video projector behave like any other DMX-controlled light source. The projector is programmed as a regular lamp, and imported into the cue list.

THIS IS HOW IT WORKS

A small box with a DMX-controlled electric motor is mounted with a black plastic disc that moves in front of the projector's lens.

The motor is controlled directly from the light desk, allowing quick and complete blocking of waste light from the projector.





TECHNICAL INFORMATION

Power supply : 220-240V AC (120V optional)
Control signal : DMX 512 (uses 1 DMX channel)
Box dimensions : 125 x 70 x 38 mm

Smal flap : diametre 10cm, length 15cm.
Medium flap : diametre 14cm, length 21cm.
Mega flap : diametre 20cm, Length 28cm.

The shutter comes in Four different versions:
- Projector shutter with DMX input
- Projector shutter with scroller supply
- Projector shutter with on/off switch
- Projector shutter with MIDI input
